

# Inspections & Site Event Management

The inconvenience of an inspection may be temporary, but considering the risks involved, it's alarming that many companies rely on a patchwork of spreadsheets or hand-written to-do lists to manage site events like inspections or corrective items like violations.

LicenseHQ tracks the entire incident and inspection life cycle — from initiation to a successful resolution — including the event/inspection itself, violations, plans of action, litigation, corrective measures taken, and payments.

- House all of your inspection-related data and associated documentation in one place; consolidate control away from field personnel
- Track all changes within a comprehensive audit log
- Feel well prepared when inspectors show up on-site
- Flag associated licenses and permits, which may be impacted by an inspection
- Standardize inspection follow-up procedures via custom templates
- Search tools grant access to data with only a few clicks
- Proactively distribute reminders to ensure timely task completion
- Reporting tools keep stakeholders apprised of current inspection status(es)
- Reduce the effort of identifying repeat offenders and their associated costs, e.g., fines of closures
- Secure your data using role-based security
- Create payment requests for violation fees with any AP system

Going green saves green.
