

# Vehicle, Fleet, and Equipment Compliance

The myriad of federal, state, and local regulations surrounding business vehicles and equipment licensing creates a nightmare for compliance professionals without the proper tools.

Many companies struggle with clusters of spreadsheets, or take a reactive approach to compliance by simply processing the mail, ignoring the well established track record of authorities sending renewal forms to field offices, to the operator directly, or simply failing to send the form. Such approaches inevitably result in considerable stress, as well as missed deadlines, fines, and equipment being removed from service.

- Centralize your vehicle and equipment asset data
- Review all changes made to your data via a comprehensive audit log
- Track licenses, permits, and registration for each piece of equipment or vehicle along with all related compliance data and supporting documentation
- Vehicle/equipment operators can enter information and upload scanned documents from any location
- Search tools allow you to access specific licenses and permits quickly and simply
- Automated reminders ensure timely task completion and help plan for upcoming work
- Provide process transparency to keep management and stakeholders apprised of current status
- Create payment requests and interface with any AP system
- Manage not only vehicle/equipment inspections but any related violations and/or corrective actions
- Keep your data secure with role-based security protocols

A client saved \$250,000 by reducing their tracking efforts and time formerly spent on research.
